To whom it may concern,

Envo-Geo Environmental Geoinformatics is delighted to support the 'MICSAT: Monitoring Ireland's Coastal areas through SATellite imagery using deep learning' research proposal, headed by Dr. Soumyabrata Dev at the Department of Computer Science in UCD.

MICSAT represents an opportunity to contribute our many years of expertise in coastal environmental remote sensing and geoinformatics to a research partnership that we believe offers strong and useful potential for the future.

Envo-Geo plans to contribute relevant expertise and staff time on a part-time basis during the first two years of the project. We believe that our relevant research experience can make a useful contribution to the MICSAT project and further we believe that this partnership would represent a valuable opportunity for us to develop our interest in delivering environmental research of value to Irish society.

Yours truly,

A handwritten signature in black ink that reads "Dr. Seamus Coveney".
